DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on February 27, 2006 has been entered.

Response to Amendment

The Amendment, filed on May 26, 2006, has been entered and acknowledged by the Examiner.

Cancellation of claims 1-25 and 30-32 has been entered.

Claims 26-29 and 33 are pending in the instant application.

Allowable Subject Matter

Claims 26-29 and 33 are allowed over the prior art of record.

Applicant's submission of Priority Papers, in English language, in accordance with 37 CFR 1.55, has overcome the outstanding rejection of claims 26-29 and 33.

The following is an examiner's statement of reasons for allowance:

Regarding claims 26 and 27, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 26, and specifically comprising the limitation of an anode formed of a positive charge carrier injecting material, a cathode formed of a negative charge carrier injecting material, a light emissive layer located between the

anode and cathode, and an unpatterned dielectric layer located between the light emissive layer and the anode. Claim 27 is allowable for the same reasons because of its dependency status from claim 26.

Regarding claims 28 and 29, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 28, and specifically comprising the limitation of an anode formed of a positive charge carrier injecting material, a cathode formed of a negative charge carrier injecting material, a light emissive layer located between the anode and cathode, and a layer of amorphous silicon located between the light emissive layer and the anode. Claim 29 is allowable for the same reasons because of its dependency status from claim 28.

Regarding claim 33, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 33, and specifically comprising the limitation of a dielectric layer located between the light emissive layer and the anode, wherein, in use, charge carriers are injected from the anode into the light emissive layer via the dielectric layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
